Education

Northeastern University, Boston, MA Expected June 2027
Candidate for Bachelor of Science in Computer Science GPA: 3.92/4.0

Experience

Videa, Software Engineering Intern May 2026 - August 2026

- Independently designed and developed a self-service Connector Console supporting **6,500+ dental practices**, using **TypeScript, Node.js, and React** to manage deployments, installers, configurations, and activation keys
- Implemented production monitoring and alerting using **AWS CloudWatch** and **Terraform**, detecting connector issues across approximately **500** dental practices
- Developed **REST API integrations** as part of the Backend Integrations team, enabling the exchange of patient and clinical data with third-party dental practice management systems and X-ray imaging platforms
- Improved tools used by **200+ employees** by implementing dark mode with **Tailwind CSS**, standardizing location IDs in **PostgreSQL**, and building a full-stack notes feature

Wrestling Reimagined, Software Engineering Intern September 2024 - December 2024

- Built and deployed an event-driven badge recognition system using **TypeScript, Node.js, and MySQL** that processed wrestling match statistics and awarded performance-based achievements to **4,000+ wrestlers**
- Investigated and resolved production issues across real-time scoring and tournament data workflows, ensuring reliable event processing across **200+ live events**

Projects

Scrapper MMA, Developer August 2026 - Present

- Developed and launched a full-stack MMA analytics, social, and fantasy sports platform using **React, TypeScript, NestJS, PostgreSQL, and Supabase**; recruited and onboarded **100+** users for beta testing
- Built data ingestion and processing pipelines to aggregate **8,900+** UFC fights, **4,700+** fighter profiles, and **49,400+** career bout records into a proprietary dataset containing round-by-round statistics
- Built and trained a gradient boosting machine-learning model using **Python, scikit-learn, and NumPy** to predict round-level judge scoring distributions from historical fight statistics and official scorecards
- Developed **1,000+** automated unit and integration tests and implemented a CI pipeline to prevent regressions through automated testing, type checking, and linting

PITSTOP, Developer, GitHub Repository January 2025 - May 2025

- Engineered a full-stack collaborative road trip planner using **TypeScript, Node.js, Express, Next.js, and MySQL**, supporting trip management, shared expenses, collaborative voting, and permissions
- Integrated **Google Maps and MapLibre** to calculate and visualize routes, enabling users to discover proposed stops ranked by detour time along their existing route
- Integrated **Firebase Authentication** and **Spotify APIs** to support trip invitations, shared playlists, collaborative music proposals and voting

HopperHelps, Developer, Hopper Hacks Hackathon, GitHub Repository February 2025

- Won **1st** place out of **230** participants at the Hopper Hacks Hackathon at Stony Brook University by developing an AI-assisted mental-health journaling application
- Leveraged the **OpenAI API** to analyze journal entries and generate sentiment data used to identify and visualize users' emotional trends

Technical Skills

Programming Languages: Java, Python, TypeScript, JavaScript, C, SQL
Frameworks & Libraries: Node.js, NestJS, Next.js, React, scikit-learn, NumPy, Pandas, Tailwind CSS, Express.js
Databases & Tools: Git, PostgreSQL, MySQL, Docker, Supabase, AWS CloudWatch, Terraform, GitHub Actions
